Results Review and Resource Request (R4)

31 MARCH 2000

#### Please Note:

The attached FY 2002 Results Review and Resource Request ("R4") was assembled and analyzed by the country or USAID operating unit identified on this cover page.

The R4 is a "pre-decisional" USAID document and does not reflect results stemming from formal USAID review(s) of this document.

Related document information can be obtained from:

USAID Development Experience Clearinghouse 1611 N. Kent Street, Suite 200 Arlington, VA 22209-2111 Telephone: 703/351-4006 Ext. 106

Released on or after Oct. 1, 2002

**TO:** Vivian Lowery Derryck, AA/AFR

**FROM:** Thomas Park, Director

**SUBJECT:** Transmittal Memo

**DATE:** March 31, 2000

The biggest story in West Africa this year was the successful transition of power in Senegal through the conduct of fair, transparent and free presidential elections. Benin has already done this twice before. In March of 2001, presidential elections are scheduled and it could well happen a third time.

This year marks the end of a remarkable decade in Benin's history. During this decade, the country has put in place democratic institutions that effectively check and balance each othernot perfectly, but effectively. Not only has there been peace and stability throughout the decade, there has been a deep and broad consensus on the strategic directions of economic and political reform. The armed forces, a destabilizing factor in the decades of the 60's and 70's, are committed to their proper role in the barracks. The press is free and human rights are protected. Not surprisingly, given this extremely favorable policy environment and political context, there has been sustained economic growth and development. Economic growth rates have averaged a little under 5% since 1994 while the inflation rate has been stabilized at about 3%. It is no wonder that the country is increasingly being seen as a democratic laboratory and a model for the rest of Africa. The challenge facing Benin is to translate its remarkable democratization progress into governance improvements. What is happening in Benin amounts to a major success story, for which the U.S. Government can take some credit. Were the country to fail, it would represent a setback for U.S. foreign policy in Africa.

At the sector level of our program, last year was full of important accomplishments. Some of the highlights were the:

- -distribution of textbooks and workbooks to every first grade such that norm of one textbook per two students was reached;
- -training of 9,000 teachers and school directors in the new pedagogy;
- -opening of Songhai's two new technical training centers in the north of the country;
- -65% increase in the sale of condoms, reaching a total of over 6 million last year;
- -sale of 36,000 cycles of oral contraceptives, exceeding the target by 42%;
- -registration of depo-provera, which will be marketed in a few months;
- -sale of 452 treadle pumps through the private sector, generating an increase in yearly income on average of \$715 per gardener;
- -introduction of the single ballot for the legislative elections, a first for francophone Africa;
- -definition of criteria for political party creation.

But this list of accomplishments does not really do justice to our program. In the education sector we have put together an outstandingly competent group of U.S. PVOs and contractors who work wonderfully well together to improve primary education, through the Ministry of Education. The difference between what we have accomplished in primary education and that

by another donor charged with helping to improve secondary education is night and day. In primary education, despite the issues described in the report, change is evident everywhere. In fact, the concern now is that the relative rates of progress have gotten out of balance to the extent that the new cohort of students leaving primary school will enter a secondary school system that is not prepared to receive them.

The importance of what the Songhai Center does cannot be overstated. It is much more than an agrobiology research and training center. It is a place where young African farmers learn how to live productive lives and to take responsibility for their own future. It is a center of excellence. It is a center of change. It is a center of hope.

In the health sector, our strategic approach to improve family health that takes into account a structurally deficient Ministry of Health in Cotonou has begun to pay off. We have made accessible a wide range of affordable health products (condoms, orals, rehydration salts, and impregnated bednets), as well as information on how to use them, through our rapidly expanding social marketing program. This year, for example, we had planned to sell 400,000 condoms a month. The actual amounts were 600,000 a month. To improve public health service delivery, our approach is to assist directly the regional health system in Borgou, one of the northern departments. That approach also is beginning to pay off. That department's capacity to assess and monitor the quality of health services, the first step to improving them, has been strengthened significantly.

In the governance sector, our lightweight-funded program (about \$1.5million a year managed through a team of four and a secretary) has had a heavyweight policy reform impact. Through the quality of the team's relationships and the strength of its arguments, the GOB was persuaded to adopt the single ballot in last year's legislation elections. The rest of francophone Africa took note of this successful first time experience. To address the problem of political party proliferation in Benin (about 120 at last count), the team's contacts with key civil society groups has begun a process to build consensus around a set of criteria that we expect will lead to a law that will regularize the creation of political parties. Through our support to Transparency International/Benin, we are helping to institutionalize the struggle against corruption.

#### Issues.

**A. Pipeline**. The size of our pipeline, as noted in last year's report, continues to be an issue. We have taken and are continuing to take steps to reduce our pipeline. These measures can be found in Part III of this report. Beginning FY1999, our total expenditures were substantially larger than our obligations, thus making a nice dent in the pipeline. We expect this trend to continue through FY2002, when we expect our pipeline to be one quarter the size it is now.

**Staffing and Workload concerns.** We were asked recently to drop one USDH from our staff. We have done this. We think we can accommodate the reduction within our existing staffing pattern without asking for a revision in our CSP. If we take further hits in staffing or funding, we will have no choice but to downwardly revise our planned results accordingly. Please keep in mind that USAID/Benin continues to have twinning responsibilities as the accounting station for Togo, Congo Brazzaville, Gabon, Sao Tome and Principe. We expect to hire an education

TAACS and a senior HIV/AIDS prevention technical adviser in FY 2000, both of whom will have key management roles in the basic education and family health strategic objective programs.

Management Contract: While we do not anticipate any substantive changes to our management contract, we may request an extension of the termination date, if required, in order to accommodate new strategic objective activities which will terminate in FY 2005. We are making changes in our Mission Performance Monitoring Plan, including the review, refinement and possible changes in indicators which we do not expect to affect our planned intermediate results nor require a change in our management contract.

#### OVERVIEW AND FACTORS AFFECTING PROGRAM PERFORMANCE

**A.** Benin Mission Performance Plan and Agency Goals. USAID/Benin's strategy, comprised of two strategic objectives and one special objective, is in full accordance with the U.S. Strategic Plan for International Affairs (SPIA), the Mission Performance Plan (MPP) for Benin and USAID agency goals. These support economic development, democracy, human capacity, and world population and human health, and are described in Part II.

USAID/Benin's strategic objectives (SO) and special objective (SpO) are:

- SO 1: More children receive, on an equitable basis, a basic education that prepares them for productive roles in society;
- SO 2: Increased use of family health services and preventive measures within a supportive policy environment; and
- SpO: Improved governance and reinforced democracy.

The program supports achievement of USAID: (1) Goal 3, "Human Capacity built through education and training" and Objective No. 3.1, "Access to quality basic education, especially for girls and women, expanded;" (2) Goal 4: "World population stabilized and human health protected;" and (3) Goal 1: "Strengthened democracy and good governance" and its objectives of more genuine and competitive political processes; increased development of politically active civil society; and, more transparent and accountable government institutions."

**B. Summary Progress in Implementing the Country Strategic Plan:** Overall the program has achieved dramatic results, although we face continuing challenges in key areas.

The education reform program is progressing successfully from its initial pilot stage to replication throughout the country, resulting in significant improvements in classroom instruction and learning. The most impressive gain was the development, production and distribution of textbooks and workbooks, based on the new curriculum. In just one year, every first grade student (400,000) received textbooks and other learning materials. In addition, 9,000 teachers were trained in a new pedagogy and how to use it. The Ministry of Education (MOE) would not have been able to make this dramatic gain without the direct support of our education program. The number of primary school parent associations participating in school management issues more than quadrupled. Despite these significant gains, the overall class repetition rate stayed at relatively high levels, caused by the nationwide shortage of teachers and the very high student to teacher ratio. Girls' enrollment presents major challenges, as we seek more varied approaches to obtain higher level enrollment.

The start up of the SO's cornerstone integrated family health program in the Borgou region, PROSAF, means the SO2 program is now fully operational. In addition, our social marketing program was expanded, resulting in impressive increases in the sales of family health products, especially condoms and oral contraceptives. Health policy improved appreciably with the development and dissemination of family health norms, policies and standards; increased public and government awareness of HIV/AIDS; and the official adoption of a policy concerning the Integrated Management of Childhood Illnesses.

We exceeded our targets for the democracy and governance program, highlighted by Benin's adoption of the single ballot, the first in francophone Africa, which contributed to reduction of electoral fraud and successful legislative elections in 1999. We are steadily improving the capacity of non-governmental organizations to operate transparently, thus increasing their credibility as effective instruments for community advocacy and change. Local level private sector activities are expanding, as we are seeing a resurgence of home gardening and palm oil production and processing through the introduction of small-scale irrigation treadle pumps and oil palm presses through our support. As communities become more integrated into the local economy and increase their revenues and tax base, a strong foundation is forming for effective decentralized local government and development.

C. Country Factors Influencing Progress: Benin continues to make steady progress in achieving the objectives of the National Conference of 1990, which was commemorated this year and which remains the reference point for political and economic reform. Adherence to a democratic, constitutional government is stronger than ever. Benin, however, has not been able to translate its impressive democratic gains into equally impressive governance gains. Although a desire to change is clear, inefficient public administration, lack of accountability and transparency, and pervasive rent-seeking behavior all adversely affect absorptive capacity, economic growth and development. Government decentralization, a key approach to improving governance and the provision of public services, has been delayed due to constitutional issues, which were resolved in March 2000, with the Constitutional Court's approval of the law to authorize local municipal elections. Although our governance targets have been met, the full impact of our overall program will be realized only when systemic governance constraints are resolved.

**D. Significant Changes:** In the education sector, the MOE is preparing a new education law that will expand primary education to include grades seven through nine and define the role of communities in a decentralized education system. With the passing of this bill, we anticipate a request from the GOB to respond to this new concept.

The health program will undergo some major changes over the next few years, as a new bilateral HIV/AIDS activity will start and six or seven field support activities will be phased out. Program resources will be targeted carefully. Starting in FY2001, the combination of the new HIV activity, PROSAF and the AIDSMark social-marketing activity will consume the bulk of the SO's budget. Another major change is that we have begun playing a far more active and important role in national level health policy reform, a trend that we expect will continue. As a result of these program changes, the SO2 performance monitoring plan has been revisited. Baseline data and targets are being established that have allowed us to provide more detailed reporting this year. Due to the nature of SO activities, data on all indicators cannot be collected and reported on an annual basis. This year, the data tables are related to product sales (a proxy for the use of family health products), access to products (sales points), access to integrated services and the policy environment. In next year's R4, we expect to maintain the indicators related to sales of family health products and access to products and services, while adding an indicator on quality of services.

Our assessment of our Democracy/Governance program, aided by the GPRA Audit of the program and the analyses of our partners, resulted in revisions to three performance indicators related to NGO-strengthening, auditing of public accounts, and local private initiatives. We believe that these revisions will provide more accurate measurement of improvements in NGO capacity, audit performance, and access to micro credit for poor populations. These changes are described in the Democracy/Governance Performance Data Tables. We are gearing up to play a greater role in facilitating decentralization, which we believe will greatly influence the performance of our program. Decentralization will give local communities the opportunity to influence decisions on and assume more responsibility for education and health services.

**E. Overall Prospects for Progress:** We expect continued progress towards our planned targets and objectives, as we address issues related to the low GOB absorptive capacity, girls' enrollment, and the inadequate allocation of primary school teachers. As the GOB is confronted by increased public pressure to address corruption, poor utilization of public services and lack of accountability and transparency, we expect its commitment to improved governance to be more clearly demonstrated. However, the resolution of many of the public sector constraints, that will enable a full impact of our program, will depend on whether the Government succeeds in reforming the public sector. Public sector reform is one of the targets agreed to under the structural adjustment program.

Government decentralization has the potential to have a major impact on development as well as governance objectives. Local governments will take on a major role in planning and meeting local development objectives, with the participation of local communities. This is directly related to our planned result of improved local environment for decentralized community initiatives. In the health area, the creation of functional health districts will facilitate the SO2 program objective of increasing access to services. The establishment of local health committees, which can work with local administrations to identify community health priorities and manage resources, would help ensure that communities play a more active role in making decisions regarding their own health care. This is key to achieving an improved health policy environment. In education, communities will gain responsibility for the construction of schools and the promotion of youth activities, influence financial and human resource decisions, and take part in school management decisions, such as related to teacher performance. These changes can help to increase access to basic education and quality of school instruction and learning.

As Benin may become eligible for debt reduction under the Highly Indebted Development Countries Initiative, we expect GOB to more vigilantly track its own performance towards economic development and poverty reduction goals. The Poverty Reduction Strategic Plan (PRSP), a requirement for participation in the debt reduction program, will replace the World Bank/International Monetary Fund (WB/IMF) Policy Framework Paper, the historic basis for WB/IMF aid disbursements. Benin is planning to develop its PRSP, using as a base its own "Minimum Social Commun" plan, which defines the current poverty reduction program. The GOB has modified its budget preparation process to track expenditures by performance targets and benchmarks. It is presumed that this plan will clearly articulate the GOB's development objectives and resource utilization targets. We will continue to track the GOB's performance and expenditures towards their development objectives as they relate to the USAID/Benin program.

# **PART II**

#### **USAID/BENIN**

**Strategic Objective Name:** More children receive, on an equitable basis, a basic education, which prepares them for productive roles in society, **680-001-01** 

**Self-Assessment: On track.** Overall, the basic education program is on track. Particularly dramatic were achievements in improving the quality of educational materials and instruction, such as the production and distribution of textbooks and workbooks in 4,500 schools along with a vast teacher-training program in the new pedagogy. Although girls' school enrollment is progressing slowly, the program exceeded its targets in overall student enrollment. The program met its targets to increase community involvement in the education system; to improve the school sanitary environment; and to provide technical skills training to primary school dropouts.

**Summary:** The program supports Agency objective, "Human capacity built through education and training." It aids the MPP goal of economic development to "contribute to the achievement of a strengthened human resource base, specifically through equitable access to primary education, technical training, and other programs." The Mission works with the Ministry of Education (MOE) and grantees and contractors to achieve five intermediate results (IRs): (1) Improved key pedagogical systems and inputs for delivery of a quality basic education; (2) Increased Equity of Access to primary schools; (3) Maintained adequate financing for primary education; (4) Increased civil and government participation in basic education; and (5) Improved institutional capacity for educational planning, management and accountability. The ultimate customers are 800,000 primary school students nationwide.

**Key Results:** The quality of primary education instruction and learning continued to improve through the expansion of the education reform program. For the new curriculum, the ratio of one textbook per two students and one workbook for each student was met for first grade as of the 1998-1999 school year. The overall enrollment rate increased from 76% in 1998 to 77% in 1999, exceeding its target by 4 percentage points. (See Table 1 to clarify.) Student instruction is improving, as evidenced by an 82% pass rate for students using the new curriculum, exceeding its target by 7 percentage points. Although progress on the primary school leaving exam based on the traditional curriculum and girls' enrollment has been slightly slower than expected, there was an increase from 67% in 1998 to 69% in 1999 in the pass rate and 1% increase in girls' enrollment.

Performance and Prospect: USAID/Benin is the primary supporter of the basic education system. Our efforts to improve educational quality through the provision of key pedagogical classroom materials and teacher training, greater parent associations' involvement in local schools, and the improvement of the school sanitary environment, largely contributed to progress in gross enrollment and pass rates. The number of parent associations playing an active role in their schools has increased from around 200 to 1,000. Performance in girls' enrollment, the school repetition and dropout rates and the passing rate for the old curriculum is below expectation. Insufficient resource allocation and utilization by MOE has been a constraint as it negatively affects the availability of teachers, which compounds the problems of school access and quality of instruction and learning. We will work with MOE to improve the allocation, management and disbursement of education resources. Through the planned new decentralization activity, under our democracy/governance program, we will help to improve community management of and access to basic education through local governance. A cut in the education program budget would result in slower gains in our objectives.

IR 1: Improved key pedagogical systems and inputs for delivery of quality basic education: We continued to assist MOE to meet its education quality standards (FQL priority norms) to improve the quality of classroom instruction and learning. The MOE with our support is moving the basic education reform program from the experimental stage to progressive expansion throughout the country. Through technical assistance from The Mitchell Group that we fund, the primary education curriculum has been improved. New textbooks have been developed and produced, and 9,000 teachers and school directors have been trained in participatory teaching and learning methods and in the utilization of the new curriculum, a dramatic accomplishment in just one year. Improved pedagogical systems and inputs are now in place for the first grade in 4,500 primary schools. For the first grade the FQL norm of one book per two children has been met. IFESH has trained almost 6,000 teachers and 1,200 directors in educational management, a more interactive child-centered pedagogy, and is strengthening the teacher support network in order to improve the quality of instruction. The school leaving exam pass rate for the traditional curriculum did not reach the expected target, recovering only 2 percent from a 3 percent decrease from 1997 to 1998, the reasons for which we will investigate in FY 2000. The pass rate for the new curriculum dropped from 93% in 1998 to 82% in 1999 in the experimental schools. The reason for this drop is also not well understood, although frequent strikes during the 1998-1999 school year may have contributed. In collaboration with the MOE, we will conduct a study to isolate the key factors to this problem.

Impressive progress has been made by Songhai Centre, which increased technical skills training for primary school leavers and drop outs through the construction and start-up of two new training centers. During 1999, around 400 students received short-term training while 200 received long-term training. Songhai students have developed technical and entrepreneurial skills, adapted to local production practices and resources, and are utilizing these skills in their local communities through the establishment of agro-enterprises and farms. The impact of the Songhai program clearly shows how students can be prepared for productive lives.

Last year we reported on both student repetition and dropout rates. During this reporting period, we have focused on the repetition rate which, taken separately, can show progress towards an improved education system. For the latest data available from 1998, the repetition rate remained the same as in 1997 (26%). This situation has resulted primarily from a nationwide shortage of teachers, a high student to teacher ratio (often over 100 to one), and the lack of adequate pedagogical materials in regions where the education reform program had not reached in 1999. Also, in certain regions, school children devote part of their school time to agricultural work and or trade. While unable to address the issue of part-time attendance, we will develop with MOE a system to adequately allocate teachers and to encourage them to serve in remote areas. We will continue progressive expansion of the reform program to cover all six grades, adding one grade per year and ensuring the FQL norms in pedagogical materials, sanitation, and quality of classroom instruction and learning. About 800 schools will receive latrines and clean water facilities. School districts will be strengthened so they can fully participate in the improvement of the education system in the new context of decentralization. We will work with 2,000 parents associations, covering nearly 50% of all the primary schools and the national and regional parents associations to increase their participation in ensuring quality education.

Through the Global Learning and Observation to Benefit the Environment (GLOBE) program, operating in 75 schools (up from 60 in 1998), children continue to develop important analytical skills while learning about their environment. The sanitary environment, also related to the FQL norms, has been improved in 380 primary schools with more than 550 facilities for latrines and safe water access, through the efforts of MCDI. The reform education measures appear to be having a positive impact on student learning. School children in Parakou are requesting opportunities to do research and draw their own conclusions rather than the teacher providing the answers for them. There are cases of children insisting on sanitary handling of food and on washing their hands frequently, even though there may be at times a shortage of drinking water.

**IR 2: Increased equity of access to primary schools:** Girl's enrollment increased from 60% in 1998 to 61% in 1999. World Education's awareness raising activities on the benefits of sending girls to school, conducted by parents associations, in addition to their construction of 20 school buildings, and our support for a Peace Corps girls mentoring activity contributed to this increase in enrollment. However, we did not meet the planned target of 62%. Our approach to focus on the Network for Promoting Girls' Education did not pay off, as the Network spent the whole year addressing issues relating to its legal status and was unable to implement community activities to encourage and facilitate girls' enrollment. As we seek a more varied approach to increasing girls' enrollment, we are working with MOE to resolve these establishment issues and to focus the network's efforts squarely on obtaining girl's enrollment objectives. A wide enrollment gap still exists between girls and boys, 61% and 91%. Given the planned targets, achieving parity remains an issue. The MOE made a significant effort to address this issue in 2000 by allocating additional funds to schools to cover the funding gap caused by the 1995 decision, as a result of our policy dialogue with MOE, to exonerate girls from paying school fees. We will continue promoting girls' education through the national network, through direct grants to NGOs, and the Peace Corps, and start focusing on girls 'retention in addition to enrollment.

**Possible Adjustments to Plans:** We plan to revise our targets for gross enrollment and maintain or increase the target for boys in line with the current status of boys/girls enrollment. We will work with MOE and other donors to ensure that students who pass the primary school leaving exam under the new curriculum experience a smooth transition to secondary school.

Other donor programs: The World Bank contributes to education quality through the financing of pedagogical materials and in-service teacher training. UNICEF supports girl's education through community awareness campaigns. Japan, the Islamic Development Bank, the World Bank and the European Union's school construction programs contribute to increasing school access. France provides assistance in secondary and higher education.

**Major contractors and grantees:** The Mitchell Group provides technical assistance to MOE to implement the primary education reform program. World Education implements the parents association-strengthening program. Medical Care Development International (MCDI) provides health education in primary schools. IFESH provides in-service training and pedagogical support to teachers. Songhai Centre implements the technical skills training program.

#### USAID/BENIN

**Strategic Objective Name:** Increased Use of Family Health Services and Preventive Measures in a Supportive Policy Environment, **680-002-01** 

Mission Self-Assessment: On track. The Mission's bilateral integrated family health activity, PROSAF, and the AIDSMark field support-financed social marketing activity both began in FY99, representing over 50% of program resources. In FY99, progress was made in the establishment of key policies related to family health and the integrated management of childhood illnesses and successful advocacy efforts raised national awareness of HIV. Impressive sales of socially-marketed oral contraceptives signaled that women will buy modern contraceptives when they have access to them, and that Benin's contraception use rate of less than 4% will increase with more access to a range of contraceptives.

**Summary:** This Strategic Objective is linked to Agency Objective 4: World's population stabilized and human health protected, and to the MPP goal to improve health and health services. Four intermediate results will be achieved: improved policy environment; increased access to family health services and products; improved quality of health management systems and services; and increased demand for, and practices supporting use of, family health services, products and prevention measures. Family health includes family planning, maternal/child health, and prevention of sexually transmitted infections (STIs) and HIV/AIDS. Activities are targeted in the Borgou Region in northern Benin, and supplemented by key national interventions with the Ministry of Health (MOH). Direct program beneficiaries are children up to age five, women of childbearing age, and groups at risk of being infected with HIV and other STIs.

In FY99, USAID/Benin used Development Assistance (DA) funds for the development and dissemination of norms, standards and protocols for family health; social marketing of family planning products; and the procurement of contraceptives. The Child Survival and Disease (CSD) account was used to finance the promotion of micro-nutrient supplementation; malaria prevention activities; HIV/AIDS advocacy; social marketing of condoms, oral rehydration salts and insecticide-treated bednets; and an environmental health activity for diarrheal disease prevention.

**Key Results:** Sales of key family health products increased considerably through the AIDSMark activity, implemented by Population Services International (PSI). A proxy measure for product use in years when data on use is not available, these figures indicate a significant surge in use of condoms and pills, critical for our HIV prevention and family planning efforts. Condom sales reached 6,246,717 in 1999, up 65% from 1998. In 1999, PSI achieved condom sales of one per capita in only six of the countries where they work, including Benin. In addition, they sold 36,120 cycles of oral contraceptives, exceeding the target by 42%. The injectable contraceptive, Depo-Provera, was recently registered, and will be added to the AIDSMark product mix this year, thereby increasing the range of contraceptive options. Sales of mosquito nets and re-treatment kits fell short of targets due to a delay in the national launch of these products. The number of sales points distributing AIDSMark products also grew considerably in FY99 with 1,419 new points added for condoms, bringing the total to over 6,900. Oral contraceptives are available in all pharmacies and many pharmaceutical outlets. More people now have access to affordable products to protect themselves against STIs and to plan their families.

**Performance and Prospects**: PROSAF's critical first year of operation focused on data collection and establishing relationships with other development partners. A participatory assessment of the health system in the Borgou Region provided baseline data for USAID's indicators related to quality of care and access to services required for the Performance Monitoring Plan, which will be finalized mid 2000.

We anticipate more thorough data collection both nationally and in the Borgou in FY 2000. FY1999 achievements in improving the health policy environment will lead to improvements in access and quality of care in FY 2000, when key policies and programs, including a new integrated approach to child health care, family health standards of care and an improved reproductive health curriculum, will be implemented. Should SO2 resources be cut, our ability to pilot implementation of IMCI would be compromised, our ability to play a leadership role in the development of national policy would be at risk, and support for the national NGO network would be significantly reduced.

**IR 1: Improved Policy Environment:** The policy environment improved significantly in 1999 as a result of progress in HIV/AIDS advocacy; the development and dissemination of standards for family health care; and the adoption of several key priority policies identified in last year's R4. POLICY Project's dissemination of the AIDS Impact Model to decision-makers, opinion leaders and journalists throughout the country raised the profile of the AIDS problem and led to the development of regional HIV/AIDS action plans. Under the auspices of the UNAIDS Theme Group, along with other donors. we carried out a series of advocacy meetings with high-level government officials to raise awareness of the development implications of AIDS. As a result of widespread media coverage, AIDS is now an issue on the national radar screen, although the National AIDS Control Program's budget has not yet increased. We financed PRIME to assist the MOH to develop and disseminate norms, policies and standards for family health services. The application of these standards will lead to improvement in the quality of care and supervision. The national training school for nurse midwives has officially implemented a program of competency-based reproductive health training, with technical assistance from JHPIEGO, which will lead to improved quality of care and access to services. This program success has inspired the national medical school to request technical assistance to improve its own reproductive health curriculum.

We have succeeded in encouraging MOH to adopt a new approach to child health care, the Integrated Management of Childhood Illness (IMCI), and to increase the price of ORS. In 1999, following a joint effort by USAID, WHO and UNICEF, the MOH officially adopted IMCI and selected our target intervention zones as the pilot zones for IMCI implementation. As a result of arduous negotiations and unrelenting advocacy efforts by us and UNICEF, the MOH agreed to increase the price of ORS, allowing the social marketing program to begin to recover costs to sustain product supplies.

IR 2: Increased Access to Family Health Services and Products: In addition to increasing distribution points for socially marketed products, we are providing technical assistance to improve the MOH's contraceptive logistics system. This year, the official national manual for contraceptive logistics management was finalized, but training to be financed by the World Bank and UNFPA did not occur due to MOH problems in planning and accessing the funds. We did not invest resources this year to collect indicator data (reported last year) because, without the planned training, no significant change was expected. We are supplementing our reporting on product access with service access data. The PROSAF management assessment ascertained that 88% of the health centers in the Borgou region do not provide integrated services. This assessment led to the identification of a minimum package of integrated services, and a plan for the introduction of the package in all health facilities in Borgou.

Community-based distribution (CBD) of family health products and services improves access to affordable family health products, counseling, and referral services. Our PROSAF, Africare and CRS partners all support CBD agents. In FY2000, PROSAF will collect baseline data in the Borgou on the percentage of the population served by CBD agents offering a minimum package of family health services and products. Based on Africare's CBD experience, we will advocate for the addition of chloroquine, for home treatment of malaria, and oral contraceptives, to make pills available to women

within their own communities. In the past, PSI supported traditional CBD, but it plans to experiment with a new CBD approach: providing market women and kiosk merchants in rural areas who already distribute socially-marketed products with more information on the products they are distributing.

**IR 3: Improved Quality of Management and Services:** Positive changes are occurring in Borgou, where the Department of Health strengthened its capacity to monitor and improve the quality of its services as a result of the PROSAF-led participatory assessment of the health system. The assessment allowed health care workers and managers themselves to identify the strengths and weaknesses of the system in which they work. It revealed that the quality of integrated health services is low in the Borgou; of the 107 standards of care for family health services, only 35 (or 32.7%) are routinely followed by health agents. This information has served as the basis for the development of a regional training system that will prioritize training for areas in which health workers are weakest. We also support improved services in the Oueme Region through the Africa Integrated Malaria Initiative (AIMI), implemented by Africare, with technical assistance from CDC and BASICS. In FY99, AIMI conducted a baseline study of the performance of health agents based on IMCI standards. A key study finding was that only 2% of mothers who brought their children in for treatment left the health center with an understanding of their child's diagnosis. Consequently, a regional action plan for improved quality of care, including communication skills of health agents, was developed.

**Possible Adjustments to Plans:** AIDS control is one of our important priorities; we anticipate signing a five-year cooperative agreement for a new HIV prevention program this fiscal year. At the same time, due to budget and personnel constraints, we will be phasing out a number of activities, including BASICS, FPLM, EHP, and JHPIEGO in an effort to bring down the number of partners from the current level of 14 to 7 by the end of 2001.

Other Donor Programs: The European Union leads donor coordination in the health sector. WHO and UNICEF support immunization and start-up activities for IMCI. UNICEF supports assistance to health districts. The World Bank finances integration of family planning in the health care system and plans to support HIV/AIDS control. In the Borgou, Germany (GTZ) and Switzerland are major donors, with GTZ implementing a community-based, primary health care program and the Swiss Cooperation providing regional infrastructure and management support. Our success will be linked to PROSAF's ability to coordinate efforts with these partners.

**Major Contractors and Grantees:** Our primary activity, PROSAF, is implemented by University Research Corporation (URC), with subcontracts to PATH, CLUSA and the local International Planned Parenthood Federation affiliate. PSI, our major partner at the national level, is funded through field support (AIDSMark). A number of other Global Bureau projects, including FPLM, PRIME, POLICY, BASICS, AIMI and EHPI, contributed to the S.O. in FY99.

**OBJECTIVE:** Increased Use of Family Health Services and Preventive Measures within a Supportive Policy

Environment

APPROVED: 03/98 COUNTRY/ORGANIZATION: USAID/Benin

**RESULT NAME:** SO 2: Increased Use of Family Health Services and Preventive Measures within a Supportive

Policy Environment

**INDICATOR:** Sales of socially marketed products

| UNIT OF MEASURE: units sold annually        |
|---|
| <b>SOURCE:</b> PSI activity reports         |
| <b>INDICATOR DESCRIPTION:</b> Sales of      |
| individual units of condoms, ORS packets,   |
| cycles of oral contraceptives, insecticide- |
| treated nets (ITNs), retreatment kits, and  |
| injectables during calendar year (Jan-Dec). |

#### **COMMENTS:**

This indicator is a proxy for measuring use of family health products based on the assumption that increased sales of family health products indicates increased use of those products.

Condoms: Limited support for social marketing of condoms began as early as 1993. However, it was not until 1996 that we began investing substantially in condom social marketing, which is why we maintain a 1996 baseline.

Oral rehydration salts (ORS): Orasel was launched in 1995 at 75 cfa/3 packets. The price was just increased in March 2000 to 150 cfa/3 packets. Therefore, targets may have to be modified next year depending on the response to the new price.

Oral contraceptives (OCs): Harmonie OCs went on the market in April 1998.

Insecticide-Treated Nets (ITNs): Sales of SuperMoustiquaire began in September 1998 in one pilot zone and were expanded nationally as of November 1999.

ITN retreatment kits: After 4 months of promotion in one pilot zone, national promotion of Alafia retreatment kits began in early 2000.

Injectables: Depo Provera, will be added to the mix of socially marketed family health products under the name Equilibre in 2000.

\*Because USAID/Benin's agreement with AIDSMARK, the implementing mechanism for our social marketing activities, extends only partially into year 2002, targets for 2003 will be determined at a later date.

**APPROVED:** 3/98 **COUNTRY/ORGANIZATION:** USAID/Benin

**RESULT NAME:** IR 2.1: Improved health policy environment

**INDICATOR:** Policy Environment Score (PES) for Family Planning (FP) and HIV/AIDS

**UNIT OF MEASURE:** score on 100-point scale **SOURCE:** POLICY Project Policy Environment

Score (PES) reports

NOICATOR DESCRIPTION: Magazine of the degree

**INDICATOR DESCRIPTION:** Measure of the degree to which the policy environment Benin supports effective policies and programs for family planning and HIV/AIDS

#### **COMMENTS:**

The Policy Environment Score (PES) is a composite indicator designed to measure the level of support and changes that take place as a result of policy activities related to family planning and HIV/AIDS. Elements included in the PES are political support, policy formulation, organizational structure, program resources, evaluation and research, and legal regulatory environment.

The sum of all the weighted category scores is the total PES. The final score can range from 0 to 100, with 100 indicating an ideal policy environment.

The PES is administered as a survey to key respondents. All respondents have some knowledge of family planning and HIV/AIDS policies and they are chosen to represent various viewpoints. They include representatives from the MOH, NGOs, universities, reproductive health programs and international donors.

Last year, baseline data on 1998 was collected simultaneously with data on 1999 in order to detect perceived changes in the policy environment from 1998 to 1999.

2003

#### **USAID/Benin**

Special Objective Name: Improved Governance and Reinforced Democracy, 680-003-01

**Self-Assessment**: Exceeding Expectations. Overall, the Special Objective (SpO) is exceeding planned targets. Through our contributions, and those of other donors, GOB is paying greater attention to the issues of corruption, lack of transparency and accountability, and poor management, all of which constrain development. Civil society is more involved in raising governance issues at the local and national levels and in safeguarding democratic gains. Although these issues are far from resolved, the GOB's growing commitment to effective governance bodes well for future improvements.

Summary of the SpO: The SpO supports the Agency's goal, "democracy and good governance strengthened" as well as Agency sub-goals 2.2 Credible Electoral Processes, 2.3 Politically Active Civil Society, and 2.4. Accountable Government Institutions. The program links with U.S. national interest in democracy and human rights, and supports the MPP democracy goal to "consolidate Benin's nascent democracy, improve good governance, and deepen respect for human rights." The SpO aims to increase the participation of civil society in national decision making; strengthen mechanisms to promote transparency and accountability; improve the environment for decentralized private and local initiatives; and strengthen and make the legislature more independent and representative. The ultimate beneficiaries of this activity are the entire Beninese population. The SpO employs a crosscutting approach to support our basic education and family health objectives.

**Key Results:** USAID/Benin support to civil society resulted in two important electoral reform measures: (i) amending the electoral code to introduce, for the first time in francophone Africa, the single ballot system, which serves as a model in the sub-region; and (ii) assisting the Autonomous National Electoral Commission to gain permanent status. These measures contributed in part to the reduction of electoral fraud and successful legislative elections. The environment for local and initiatives has improved through the lending of micro credit to retail traders and entrepreneurs, of whom 86% are women, in disadvantaged and poor communities. A critical mass of viable NGOs is forming, applying management skills, and beginning to advocate for their constituents.

**Performance and Prospects:** We have played a key role in assisting GOB efforts in electoral reform and in strengthening civil society organizations and the legislature, while complementing the efforts of other donors in the sector. We have made a number of adjustments to intermediate results and indicators, based on internal assessments, partners reviews, and greatly aided by the GPRA audit recommendations. Indicators of IR1, described below, were reassessed and adjusted to conform to audit recommendations. In revising the Mission Performance Monitoring Plan this year, we will conduct an overall assessment of indicators, and will report any further adjustments in indicators and data in the next R4. A reduction in D/G funding below the minimum strategic plan scenario will negatively affect our efforts to strengthen the national legislature, to support free and fair national and local elections, to strengthen civil society advocacy and to combat corruption.

**IR1.** Increased participation of civil society in national decision-making: Through BINGOS training, NGOs are better able to advocate for change and influence decision making. BINGOS NGOs are now seen as model NGOs due to their professionalism and are considered the most

functional NGOs in their localities. They are able to attract funding from other donors and GOB. Forty-one out of 60 BINGOS-supported NGOs exhibit operations that are transparent and honest, indicating they are becoming more credible advocacy institutions. NGO advocacy efforts are gaining momentum and producing concrete impacts. For example, "Jeunesse Ambition" led a successful advocacy campaign convincing the local government of Porto-Novo to designate a public waste-disposal site for private trash collection, thus improving the environmental health of the area. To sustain NGO advocacy, BINGOS NGO training graduates have created a governance network to advocate for effective local development. Sustained NGO advocacy will lead much more quickly to increased NGO participation in decision making and improved governance once NGOs and the GOB understand how to best work together. We will begin activities to increase local government capacity, including improving collaboration between local government and NGOs, especially in health and education services. BINGOS is in its final year. We plan an evaluation on the impact of NGOs on health and education services and advocacy.

**IR2.** Strengthened mechanisms to promote transparency and accountability: The mechanisms of public audits and civil society action are improving to ensure transparency and accountability. The Supreme Audit Institutions (SAIs) performed audits of 54 public accounts, compared to 42 planned. This is a revised indicator, more accurately reflecting the actual work performed by SAIs. We have signed a Memorandum of Understanding with the Office of the Inspector-General of Finance (IGF) to provide training to all inspectors in exchange for project assessments by IGF which also will provide a means to verify IGF's increased competence and capacity. Public awareness and social consciousness on corruption issues is growing stronger through public for and debates on various anti-corruption themes, carried out through a program implemented by Transparency International/Benin (TI/Benin), and by other civic action groups. Political campaign financing is now being regulated by the Chamber of Accounts of the Supreme Court which instituted a special reporting procedure in the electoral process, and published a report, an outcome of USAID training. Although not all political parties have complied, this new procedure contributed to successful elections in 1999. We will continue to finance anti-corruption activities, assist civil society to draft anti-corruption legislation, and assist the Chamber of Accounts to become an independent Court of Account.

**IR3.** Improved environment for decentralized private and local initiatives: VITA/Microbank has made a total of 3,242 micro-loans to date to 2,017 clients, of which 80% were issued to very poor clients, defined as those whose assets are less than US\$ 333. About 86% of the beneficiaries are women, and the repayment rate was 98%. Micro-bank is making giant steps towards self-sustainability, anticipating full sustainability by 2002, if additional lending capital is mobilized. We are contributing to decentralized economic growth through our support of the market gardening and oil palm sub sectors. In the last two years, Appropriate Technology International (ATI) sold 452 treadle pumps for small scale irrigation (338 in 1999) that increased on average each gardener's yearly income by \$715 (143%) as compared to a gardener not using a pump. These pumps generated \$228,294 in additional income for farmers and artisans in 1999. In the oil palm sub sector, 24 palm oil producing businesses have either started-up or modernized through the use of USAID/ATI-promoted palm oil presses. This year, we are beginning activities to increase public awareness on decentralization in the Borgou region. Next year, we will continue technical assistance to Micro-bank to ensure its sustainability as a permanent private sector organization. Our hypothesis is that through micro-credits and promotion of appropriate

technologies, beneficiaries will increase their disposable income and participate in local development by accepting to pay local taxes. We will continue exploring linkages between microfinance and other Mission-funded activities. Also, we will assess the link between increased disposable income generated by beneficiaries and the impact on education and health.

IR4. A strengthened, more independent and representative legislature: USAID/Benin is initiating reporting on IR 4 with this report. We contributed greatly to fair and transparent elections in Benin in March 1999, which produced a new legislature composed of approximately 70% new members. Important achievements have led to this result. Benin instituted an improved electoral code, including the adoption of a single ballot system of voting for the first time in francophone Africa with assistance from the International Foundation for Election Systems (IFES). We supported voter education campaigns and the reinforcement of the organizational capacities of the Autonomous National Electoral Commission. We contributed towards the changing of the ad hoc status of the Autonomous National Electoral Commission through the creation of a permanent administrative secretariat, SAP/CENA. SAIs were trained in electoral campaign spending controls, reported under IR 2. We began training local women NGOs to promote their participation in decision making; a national platform is being developed as a stepping stone to greater political participation. We began an assessment of the multi-party system and the development of recommendations to improve the political party charter. In implementing these recommendations, we expect to see a reduced number of political parties (currently 118), yet more effective in stimulating political participation in the democratic process. Next year, we will report improvements in the operations of the National Assembly as we start implementation of the legislative strengthening activity.

**Possible Adjustments to Plans:** USAID/Benin will place greater emphasis on creating capacity for local governance. We will encourage increased collaboration among the planned local governments (to begin in FY 2001) and civil society to address local development concerns. At the end of FY 2000, we plan to start a new decentralization activity at the end of FY 2000 that will: (i) help local governments to formulate, implement and enforce policy decisions and develop strategic plans for local development; (ii) establish mechanisms for local communities to be actively involved in financial and human resources management and in setting health and education priorities; and (iii) help local education and health directorates to actively participate in local decision-making. The DG results framework will be modified accordingly.

Other Donors Programs: The sector coordinator, Switzerland, supports local grassroots initiatives. Germany intervenes in decentralization, civic education and the School of Administration. Denmark finances NGO local grassroots initiatives. France works on judicial reform, decentralization and public administration. The World Bank assists GOB financial and administrative reform, and supports the National Unit of Public Ethics. Canada assists public administration reform and improvements in the private sector environment. UNDP assists electoral coordination, public administration, and Internet access.

**Major Contractors and Grantees:** U.S. private voluntary organizations partners are Africare, ATI, VITA, The Asia Foundation, and universities such as State University of New York/International Development Group. GOB partners include the National Assembly, IGF, the Chamber of Accounts, GOB Decentralization Mission and local NGOs such as TI-Benin.

| verification and validation of data during the next  |      |         |        |  |  |
| reporting period.  |      |         |        |  |  |

# PART III

**Program Resources.** USAID/Benin's request for FY 2001 reflects the CP level, which includes a decrease in Child Survival (CSD) funds for Basic Education SO, and in Development Fund for Africa (DFA) funds for Democracy/Governance SpO. The Mission's request for FY 2002 reflects the CSP planned levels at \$16 million.

USAID/Benin has achieved considerable progress in reducing the pipeline. The major accomplishments to date are: 1) de-obligating \$14 million from its education non-project assistance (NPA) program in 1998; 2) re-obligating \$7 million to its education project assistance program; 3) accelerating the expenditure rate under the education SO; and 4) putting in place a five-year institutional contract under the family health program.

Overall, the projected program expenditure trend exceeds the obligation trend, starting FY 2000. The actual expenditure rate was \$18 million in FY 1999 and is expected to reach \$26.1 and \$28.6 million in 2000 and 2001 respectively, dropping to \$22.3 million in 2002. At the same time, the obligation trend dropped radically from \$24 million in FY 1999 (including re-obligated \$7 million) to \$13.9 million in 2000 and \$14.6 in 2001, which is 11% below our CSP overall levels. These trends make a significant impact on our pipeline that will drop in 2002 to 25% of FY99 levels. Our overall program pipeline will be within the maximum length of allowable forward funding with 14, 7, and 6 months of pipeline in 2000, 2001, and 2002 respectively.

- 1. Strategic Objective #680-001-01: Requested funding will finance the progressive expansion of the education reform program to cover all six grades, including the production of textbooks and other teaching materials, community participation and decentralization, teacher training, health education, and technical skills training. The FY 1999 actual expenditures were \$11.4 million and will reach \$13.2 and \$15.2 million in 2000 and 2001 respectively, with a slight decrease to \$11.8 million in 2002. The accelerated expenditure rate is mostly a result of dropping the NPA portion and projectizing the resources. In 2002, some of the current activities will phase out, and expenditures under new activities are prudently estimated at a lower level. Thus, the education pipeline will drop in 2002 to 15% of FY99 levels and will be sufficient for four months of forward funding. Therefore a further cut in FY 2002 education budget will have a negative impact on the education reform program as the resources planned for girls' education activities and health education in schools would become too tight to enable us to achieve expected results. First quarter obligation request will be introduced in early FY 2002.
- 2. Strategic Objective #680-002-01: Following a careful pipeline review, our request for FY 2002 is at planned CSP levels. In addition to the start up of a five-year institutional contract under the family health program in FY99, we anticipate signing a five-year cooperative agreement for a new HIV prevention program this fiscal year. We will phase out a number of activities, including BASICS, FPLM, EHP, and JHPIEGO in an effort to bring down the number of partners from the current level of 14 to 7 by the end of 2001. Field support requests will drop, consequently, for 2001 and 2002. Estimated expenditures are over \$10 million per year through 2001 and \$8.3 million in 2002. The health pipeline is significantly reduced in 2002 to 41% of FY99 levels. Because the projected pipeline at the end of 2002 will be sufficient for less than three months of forward funding, we will request a first quarter obligation in FY 2002.

**Special Objective** #680-003-01: Our request for FY 2002 is at the CSP levels. As the democracy/governance funds have always been limited, the large reduction to \$1.326 million in FY 2000 (33% below our CSP levels) hit our program hard. Even though the FY 2001 funding at \$1.856 is closer to our request levels, the projected pipeline will drop in 2001 to a low level of eight months forward funding. Based on the expenditure trend, it is therefore vital that we be

given the resources at the planned CSP levels. The requested funding will finance ongoing activities to improve environment for local initiatives, to support election reform, to promote women's participation in politics, anti-corruption, the strengthening of the National Assembly, and a new decentralization project, planned for this fiscal year. We will request a first quarter obligation to support presidential and municipal elections, scheduled for mid 2001.

**Workforce:** Mission's workforce levels will remain stable with the exception of one lost USDH position. By the end of FY 2000, and through FY 2002, staff level will be 70. The Africa Bureau instructed us to reduce USDH staff by one position effective Sept. 30, 2000. The loss of the education team leader will require us to reassign responsibilities among DH staff. In FY 2001 and 2002, we will rely upon USAID/W, other assistance, and a TAACS advisor for support. This will necessarily divert program funds from direct implementation of education activities.

Last year, the post-wide FSN wage survey designed to remedy the highly skewed pay plan for FSNs was successfully completed, and the FSN pay plan was adjusted post wide. This year, a Mission-wide classification exercise was conducted during which all FSN position descriptions, analyses, and evaluations were re-done. The results show that approximately 12 positions are to be upgraded, 9 of these are professional positions. With fewer USDH, it is imperative that the FSN staff be trained to assume greater responsibilities. Therefore, an emphasis on training will continue through FY 2002.

**Operating Expense and Resource Request:** Due to insufficient funds, procurement plans for FY 2000 have been delayed. As a result, in FY 2001, equipment costs and transportation costs for freight are budgeted to increase reflecting the procurement of a PBX phone system and energy efficient air conditioners. Equipment costs decrease accordingly in FY 2002, although transportation/freight costs remain constant due to increases in freight costs.

Land and structures costs incurred in FY 2000 and FY 2002 are due to modifications made by the Mission as the result of additional office space construction by the landlord. We will pay for the wiring of the new ADP space, and protected walkways between the buildings in FY 2000. Funds in FY 2002 have been set-aside for the expansion of the conference room to allow for Mission-wide and partner meetings.

Personal service payments are increasing dramatically from FY 2000 to FY 2001 due to the upgrade of 12 FSN positions, and the change in the Agency's Forward Funding Guidance for OE. An additional two months of OE funding (November and December 2000) on the Mission's FSN contracts now must be funded with FY 2001 OE resources.

Staff travel and transportation costs are budgeted to increase in FY 2001 due to larger R&R family sizes, and the timing of transfers to post. For similar reasons, the increase in personnel benefits in FY 2002 is primarily due to an increase in educational allowance. However, rental costs, and operation and maintenance of facilities, are both budgeted to decrease from the FY 2000 level due to the loss of one U.S. direct hire position.

Finally, other services are budgeted higher in FY 2000 due to the funding of a general assessment of the host country government's financial and contracting capabilities which was originally planned for FY 1999, but which has been rescheduled for FY 2000.

### Accessing Global Bureau Services Through Field Support and Buy-Ins

Prepare one set of tables for each Fiscal Year (FY2000, FY2001, FY2002)
Prepare one set of tables for each appropriation Account
Tables for DA and CSD may be combined on one table.

For the <u>DA/CSD Table</u>, columns marked with (\*) will be funded from the CSD Account. (\*\*) Health Promotion is normally funded from the CSD Account, although amounts for Victims of War/Victims of Torture are funded from the DA/DFA Account

#### FY 2002 Budget Request by Program/Country

Fiscal Year: 2002 Program/Country: Benin

\*GDO - 12: for the rare case where an officer manages activities in several technical areas, none of which predominate, e.g., the officer manages Democracy, Health, and Environment activities that are about equal. An officer who manages primarily Health activities with some Democracy and Environment activities would be a Health Officer, BS 50.

remaining IDIs: list under the Functional Backstop for the work they do.

#### **Annex 1.** Environmental Impact & Compliance Information

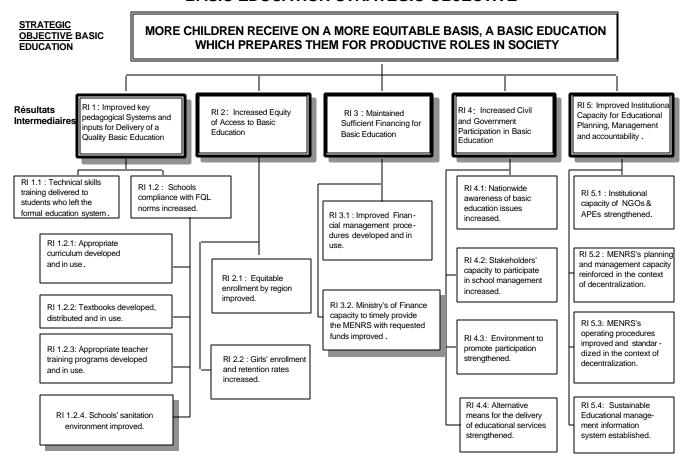

**Component 1**. Plan for new or amended IEE or EA actions for coming year. Planned Reg. 216 actions are listed in FY00 column in the Table below.

**Component 2**. Compliance with previously approved IEEs or EAs. As reflected in the FY99, FY 00 and Comments columns below, the Mission is in the process of reviewing all SO and SpO activities and their corresponding IEEs in order to create comprehensive SOAG level IEEs. All SO1 and SO2 activities are in compliance with their corresponding approved IEEs. The SpO1 IEE needs to be reviewed and updated to ensure that it appropriately covers all SPO1 activities.
